

Natural Power - Decommissioning Case Study

Project:	Decommissioning
Client:	Confidential
Project Description:	Decommissioning
Services Provided:	<p>Natural Power was commissioned to undertake permit management for offshore wind turbine decommissioning activities in UK waters. This involved:</p> <ul style="list-style-type: none"> → Liaising with Determining Authority to establish which activities would require a Marine Licence to undertake → Undertaking the impact assessments required to inform the resultant Marine Licence application → Working with the appointed contractors to establish method statements for novel engineering works → Undertaking European Protected Species assessments to allow permitted work to place
Added Value:	<ul style="list-style-type: none"> → Contribution to the corporate memory of the project as Natural Power had been involved with the project since its inception → Utilising our knowledge of the area to enable the assessments of potential impact to be undertaken without the requirement of additional ecological surveys. This increased the speed, and decreased the costs, of the licence application → Utilised our strong relationship with the National level stakeholder and Determining Authority to facilitate the permit process
