

## PROVIDING OPERATIONS AND ASSET MANAGEMENT SERVICES TO RENEWABLE ENERGY ASSETS ACROSS THE GLOBE

### SITE MANAGER'S DUTIES INCLUDE:

- Ensuring that all personnel working on the project do so in a safe, coordinated, and documented manner through strict adherence to current OSHA Health and Safety regulations, policies, and guidelines
- Auditing maintenance activities in accordance with manufacturer published specifications and procedures
- Coordinating work activities with ControlCentre
- Performing high voltage switching work in the project substation or collector system
- Managing balance of plant work including substation, site access roads, waste disposal, and facility upkeep

### SERVICES PROVIDED:

- Site safety and environmental procedures
- Contract management and oversight
- Operations and maintenance reporting
- Energy based operations and maintenance plans
- High voltage management and switching operations
- Site inspections and auditing
- Commercial management and administration
- Budgeting
- Maintenance of O&M documentation
- Landowner and community relations

**Our site managers act as the owners' representative, ensuring that the project runs smoothly and that issues affecting production are rapidly resolved.**

Natural Power always operates and maintains renewable energy assets in line with all relevant regulations, guidelines and industry best practices to guarantee the highest levels of production while keeping safety and with the environment at the forefront.
